

Auto Configure eduroam wireless network on User's Notebook (for OS Vista, Windows 7 and 8)

eduroam auto configuration package.

Pre-requisites

- Internet connectivity ready on your own external wireless service provider (eg SingTel, StarHub or M1 etc) or use your own home network to download the configuration zip file (auto add ssid.zip file)

1) Download and unzip the file name ["auto add eduroam.zip"](#) ([click here to download](#)) onto your local C drive and thereafter check and verify the folder "auto add eduroam" is created.

2) Inside this "auto add eduroam" folder, double click this file "add eduroam.bat" to run the batch file. This process will auto configure eduroam wireless network into your system.

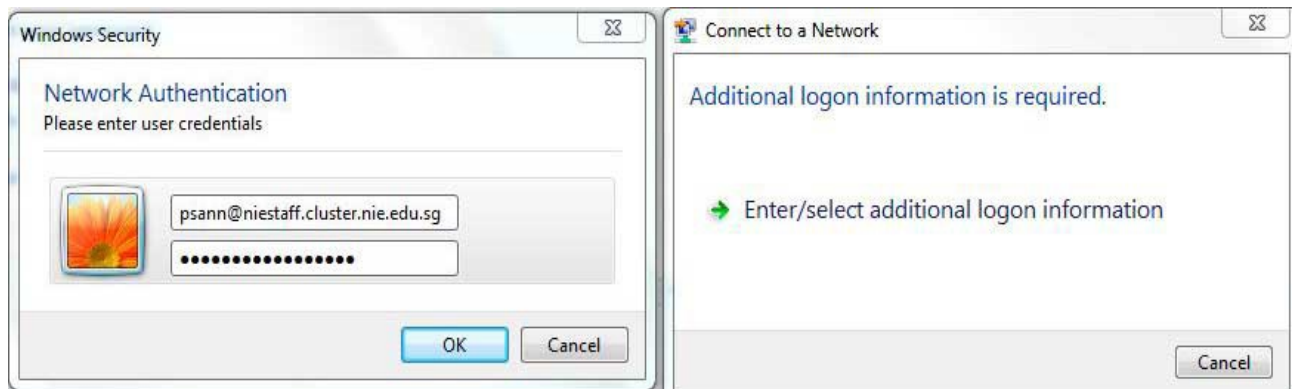

3) When done, the **eduroam** wireless network is created.

4) Input your full path username's account **username & password** when prompted.

for staff : *username@niestaff.cluster.nie.edu.sg*

for student: *userID@niestudent.cluster.nie.edu.sg*

Note:

1. Please restart your system if credentials had entered but still failed to connect. Re-enter your credentials again after power-up.
2. You may wish to manually configure **eduroam** if all else failed.
